University of Washington*

Michael Parchman, MD
*Co-Chair [thru July 2022], Kaiser
Permanente WA Health
Research Institute*

Ciaran Fairman, PhD
*Upcoming Chair [effective July
2022], University of
South Carolina*

About: The goal of the CPCRN Health Behaviors Workgroup is to examine and characterize the complex relationships among social, structural, and commercial determinants of health, individual characteristics and experiences, and cancer outcomes, including survivorship and mortality. The primary objective of the Workgroup is to advance the understanding of how determinants interact to influence cancer-related outcomes and disparities and provide information that can be used by researchers and public health practitioners to inform the design of strategies and interventions intended to mitigate the health impacts of cancer.

Planned Products and Deliverables:

- Conduct stakeholder focus groups to receive feedback on a framework developed to address cancer disparities
- Finalize framework to address cancer disparities
- Continue drafting “think piece” paper describing the framework’s development and how it can be applied to address cancer
- Submit at least one conference abstract about the framework
